### Calibration

This unit is configured to meet Gemini's quoted specification during its manufacture.

We recommend that the calibration of this unit should be checked annually against a calibrated reference meter.

A certificate of calibration, traceable to a national standard, can be supplied for an additional charge either at the point of purchase, or if the unit is returned for a service calibration.

### Notes

<b>Battery Type</b>	Tekcell SBAA02P, SAFT LS14250 or LST14250;
The logger will operate with other 1/2AA 3.6V Lithium (Li-SOCl <sub>2</sub> ) batteries but performance cannot be guaranteed.	
<b>Replacement Interval</b>	Every two years
Before replacing the battery the data logger must be stopped.	
Data stored on the logger will be retained after a battery is replaced.	
If used at low temperatures the data logger should be allowed to warm to room temperature before it is opened to avoid condensation forming inside the unit.	

The position of the unit's trigger start switch is indicated by the ••• label on the back of the logger. When the "Wait until trigger event" option is selected in the Tinytag Explorer software, the green LED on the unit will flash once every eight seconds, indicating that the unit is waiting to log. When a magnet passed over the label, the green LED will light briefly to indicate that the unit has been activated. Once activated, the green LED will flash every four seconds to indicate that the logger is recording.
